

Synergy Robusta Biological Aerated Super Septic Tank.

Synergy Wastewater Treatment Products are pleased to announce the launch of their latest product the BASS1, a hybrid of the successful Robusta Low Profile Septic Tank.

The BASS1 Biological Aerated Super Septic Tank with filtered outlet is offered to the market as an alternative to a Sewage Treatment Plant. This product is not intended, nor suitable for discharge to a watercourse. However, if you are discharging to a Soakaway then the BASS1 is an economic solution to a full blown Treatment Plant. The BASS1 has a state of the art blower unit of only 38watts, which provides the air supply to a fine bubble diffuser in the base of the final settlement zone.

The BASS1 is an engineered product; all components are easily accessed from the surface to ensure safe and easy access for ongoing future maintenance.

The BASS1 is suitable for two three bedroom properties, or a single property of up to eight bedrooms. Dimensions: - 1.5 Dia. x 2.8 metres long, Inlet to Base 1.4 metres.
